Objective:

"This dashboard is designed to provide a 360-degree view of business operations by integrating sales performance, customer behavior, and logistics efficiency. It aims to identify growth opportunities, monitor return trends, and optimize shipping workflows to enhance overall customer satisfaction and profitability."

BI Dashboard Sales Performance Insights

1- Financial Performance:

- **Total Revenue:** Generated \$2.33M in sales across 5K orders.
- **Profitability:** Achieved a total profit of \$292K with a 13% profit margin.
- **Volume:** Successfully moved 39K units, indicating high operational throughput.

3- Growth Trends (2022–2025)

- **Consistent Expansion:** Revenue grew from \$494K (2022) to \$746K (2025).
- **Growth Rate:** A substantial 51% increase in sales over three years, with the strongest momentum starting in 2024.

2- Category & Product Insights :

- **Top Performer:** Technology is the primary revenue driver, contributing \$840K in sales.
- **Profit Leaders:** Sub-categories like Copiers and Phones show the strongest contribution to the bottom line.
- **Margin Alert:** Furniture (specifically Tables and Bookcases) shows significantly lower margins compared to its sales volume, suggesting a need for cost or discount optimization.

4- Key Recommendations

- **Capitalize on Tech:** Scale marketing efforts for high-value Technology products.
- **Efficiency Audit:** Investigate low-margin sub-categories to reduce overhead or shipping costs.
- **Sustain Momentum:** Analyze the 2024 growth drivers to replicate success in upcoming quarters.

Discount and Profit dashboard

1- Discount Overview

- **Total Discounted Orders:** 3K orders involved discounts, representing a significant portion of total sales.
- **Average Discount Rate:** The global average discount stands at 16%.
- **Operational Impact:** There are 1K Loss Orders, indicating that aggressive discounting or high costs are making 20% of orders unprofitable.

3- Customer Retention (One-Time Customers)

- **Retention Metric:** Identified 12 key high-value one-time customers, but the sub-category breakdown shows a broad base of single-purchase users.
- **Category Concentration:** Storage, Art, and Phones have the highest count of one-time customers (over 300 each).
- **Opportunity:** These categories represent a major opportunity for "remarketing" to convert one-time buyers into repeat customers.

2- Profitability & Discount Correlation

- **Negative Margins:** Tables show a negative profit margin (-9%), which correlates with a high average discount (approx. 30-37% for Binders and Machines in similar categories).
- **High Margin Categories:** Labels, Paper, and Envelopes maintain the highest profit margins (above 40%) despite moderate discounting.
- **Discount Sensitivity:** The "Discount Impact by Category" chart shows that Technology absorbs the highest discount value (\$202K), yet remains the most profitable overall.

4- Strategic Recommendations

- **Restrict Discounts on Furniture:** Reduce discount thresholds for Tables and Bookcases to move them out of negative margin territory.
- **Protect High-Margin "Small-Wins":** Maintain the pricing power of Labels and Paper as they provide stable, high-margin cash flow.
- **Loyalty Conversion:** Implement a follow-up campaign for "Storage" and "Phones" buyers to increase the customer lifetime value (LTV).

total sales, total profit and total orders by Customer Name

total sales, total profit and total orders by Customer Name

Customer Analysis dashboard.

1- Key Customer Metrics

- **Total Customer Base:** 804 unique customers.
- **Engagement:** High loyalty levels with an average of 6.36 orders per customer.
- **Monetary Value:** Each customer generates approximately \$2.89K in sales, resulting in a \$363.55 profit per customer.

3- Top Customer Performance

- **High-Value Accounts:** Sean Miller is the top customer by revenue (\$25.04K), though interestingly shows a negative profit margin (-\$1.98K), likely due to heavy discounting or high returns.
- **Profitable Accounts:** Customers like Tamara Chand and Raymond Buch provide the best balance of high sales volume and positive profit contribution.

5- Recommendations

- **Audit Top Tier Accounts:** Investigate the loss-making high-revenue customers (like Sean Miller) to improve account profitability.
- **Re-ignite Acquisition:** Develop new marketing campaigns to address the downward trend in new customer sign-ups.
- **Segmented Loyalty Programs:** Target the "Corporate" and "Home Office" segments specifically to increase the \$363 average profit per head.

2- Acquisition Trends (New Customers)

- **Slowing Acquisition:** There was a significant peak in new customers in 2022 (605), followed by a sharp decline in subsequent years (11 in 2025).
- **Strategic Shift:** The business has transitioned from a "customer acquisition" phase to a "retention and monetization" phase, focusing on extracting more value from the existing 804 customers.

4- Category Sales Distribution

- **Balanced Portfolio:** Sales are evenly distributed across categories:
 - **Technology:** 36.1%
 - **Furniture:** 32.4%
 - **Office Supplies:** 31.5%
- This balance indicates that the customer base has diverse needs and isn't over-reliant on a single product type.

Returns Analysis dashboard.

1- Key Return Metrics

- **Return Volume:** A total of **296 returns** were processed.
- **Financial Impact:** These returns account for **\$180.50K in lost sales** and **\$23.23K in lost profit**.
- **Return Rate:** The overall return rate is exceptionally low at **0.06%**, suggesting high product satisfaction or strict return policies.

3- Product & Category Breakdown

- **High-Impact Products:** The **Canon imageCLASS** copier is the most returned item by value (**\$14K in sales**), significantly impacting returned profit (**\$6.7K**).
- **Category Leaders:** **Office Supplies** has the highest frequency of returns, followed by Furniture and Technology.

2- Temporal & Regional Patterns

- **Seasonal Spikes:** Return activity peaks significantly toward the end of the year (Months 10 and 12), with returned sales hitting over **\$25K** in December.
- **Regional Concentration:** The **West region** dominates return volume, accounting for **63.85% (189 returns)** of the total.
 - *Insight:* This disproportionate volume in the West warrants a logistical or quality control investigation specific to that region.

4- Strategic Recommendations

- **Target the West Region:** Audit shipping and handling processes in the West to identify why it contributes to nearly two-thirds of all returns.
- **Product Quality Review:** Investigate the "Canon imageCLASS" returns to determine if the issues are due to technical defects or buyer remorse.
- **Year-End Preparation:** Anticipate higher return processing needs during Q4 based on the historical seasonal spikes.

shipping

Table Show

shipping Analysis dashboard.

1- Shipping & Logistics Performance

- **Average Lead Time:** The average shipping duration is 4.00 days.
- **Operational Range:** There is a significant gap between the minimum shipping time (0 days) and the maximum (11 days), suggesting potential inconsistencies in logistics handling.
- **Volume:** The system managed a total of 995 shipments.

3- Sub-Category Deep Dive

- **Top Performers:** Phones are the primary profit driver (\$12.119K),
- **followed by Chairs (\$7.145K). Critical Outlier (Machines):** The tooltip reveals that Machines have a massive "Discount to Profit Impact" of 5255.63%. This suggests that the discounts applied to this category are effectively erasing any potential gains.
- **Negative Performance:** Tables and Bookcases are currently operating at a loss (negative profit), which warrants a review of their supply chain costs or pricing tiers..

2- Profitability & Discount Impact

- **Margin Erosion:** There is a stark difference between the profit margin without discounts (26.32%) and the actual profit margin (10%).
- **Discount Efficiency:** The "Discount to Profit Impact" stands at 151.62%, indicating that for every dollar of profit made, a substantial amount is being sacrificed to discounts.
- **Revenue Loss:** Total profit before discount was 130K, which has been significantly reduced by current pricing strategies.

Recommendations

Discount Audit: Immediately review the discount logic for **Machines**, as the current impact is unsustainable.

Portfolio Adjustment: Investigate why **Tables** and **Bookcases** are yielding negative returns despite the overall shipping volume.

Logistics Optimization: Aim to reduce the **11-day** maximum shipping peak to bring it closer to the 4-day average for better customer satisfaction.
